

## Read&Write 10 GOLD for Windows New Features and Enhancements

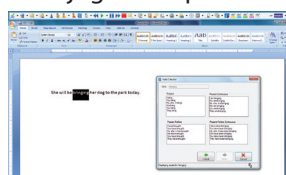

### NEW! Picture Dictionary

An online Picture Dictionary is now available to display images for a selected word. Visual images often help users better understand a word's meaning.

### NEW! Verb Checker

The Verb Checker can be used to help determine correct verb conjugation. The user selects a verb and indicates the tense (past, present, future) they wish to see. Multiple verb conjugation options are then provided.

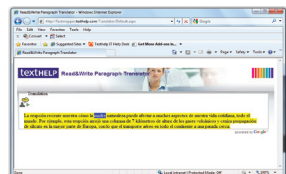

### NEW! Vocabulary List Builder

A vocabulary list can easily be built by either selecting words in a document or web page using the Study Skills highlighters or by entering words manually. A Microsoft Word document is automatically created with the vocabulary words, dictionary definitions, and images representing the words. This tool helps improve and expand students' vocabulary skills.

### NEW! Paragraph Translation

In addition to the online single word Translator, users can now have full paragraphs or blocks of text translated to or from English and their language of choice.

### NEW! Confusable Words

Confusable words, such as "through" and "thorough", are now identified in addition to homophones which sound the same but are spelled differently and have different meanings.

### NEW! Product Feature Video Tours

New video walkthroughs of all features are available directly from the toolbar or the Texthelp website.

### Text to Speech

Users can use the up and down arrow keys to dynamically change voice speed during playback. In addition, the Samantha voice from Nuance is now available and all voices are pre-installed.

### Word Prediction

Subject-specific prediction word banks are now available for download. Users can also add their own word banks.

### Screenshot Reader

Inaccessible text can now be captured in three ways – surrounding the text with a rectangle, hovering over the text, or drawing freehand around the text that the user would like read. Captured text can then be read aloud as often as needed. When exporting text to Word, text can be appended to an existing document.

### SpeechMaker

When converting text to an audio file, pauses will now be added between sentences as well as when other punctuation is encountered. The length of pause varies depending on the punctuation.

### DAISY Reader

DAISY Reader includes support for MATHML and for books created using the Save as DAISY Plug-in.

### PDF Aloud

Users can read PDF files with Adobe Reader X or Acrobat X using a modified PDF Aloud interface.

### Study Skills Tools

Users can now collect highlights from multiple open documents or web pages and export them into a single document along with the bibliography information.

### Fact Finder

Users can select from a list to add new websites to search when researching.

### Fact Folder

The Microsoft Word button can now be used to transfer all collected research facts into a Word document. A bibliography (in the format of choice) is created for all compiled facts and presented at the end of the document.

### Online Fact Mapper

Users can add images from the new Picture Dictionary, upload their own imagery, and search for images based on image categories. Bi-directional arrows have been added to improve map flow.

### Scanning

Support for ABBYY FineReader Version 10 has been added.

### Toolbar

A Toolbar notification window now appears when toggling toolbars. In addition, the Study Skills tools have been added to the default Research toolbar.

### Settings

Users can now reset all Read&Write GOLD defaults from the main menu. Administrators can create and pre-set user settings prior to first time use.
